**VITA ADIVA® IA-CEM**

Ultra opaque luting solution for implant restorations

---

**Product description**

**What?**
- VITA ADIVA IA-CEM is an ultra opaque, strongly-masking, dual-curing luting composite for implant prosthetics.

**What for?**
- It is used for permanent adhesive bonding of (abutment) crowns and mesostructures on adhesive titanium bases and individual titanium and zirconia abutments.

**With what?**
- There are material-specific, matched bonding agents for the luting composite to ensure durable bonding of the restoration and the abutment.

---

VITA – perfect match.
**PRODUCT BENEFITS**

**Reliable masking**
- Reliable masking of titanium abutments, thanks to ultra opaque, tooth-colored luting composite.

**Wide range of applications**
- The only ultra opaque luting composite suitable for intra- and extraoral use.

**Safe adhesive bond**
- Durable bond, thanks to high adhesion values to titanium and (hybrid) ceramic restorative materials.

**Efficient luting**
- Material consumption is approx. 30 % lower than for conventional mixing tips, thanks to the automix syringe with a short mixing tip*.

**Time-efficient treatment**
- The luting material ensures time-efficient treatment, since self curing is completed extraorally after 7 minutes and intraorally after 4 minutes.

---

**PRODUCT USE**

- **VITA ADIVA IA-CEM** offers universal and reliable use for bonding of all restorations made of feldspar, glass and hybrid ceramics, zirconia and composite.

---
