

Residual risks of press ceramics (such as VITA AMBRIA)

Possible complications and residual risks of press ceramics in general, and not specific to VITA materials, are:

- Loosening of the restoration, resulting in possible choking
- Caries in marginal gaps
- Cracks in the restoration
- Post-operative hypersensitivity
- Plaque deposits
- Irritation of the mucosa
- Gingivitis and gingival irritation
- Intolerance and potential allergic reaction
- Breakage

These risks must be communicated to the patient by trained personnel (e.g., dental professionals).
