

Residual risks of hybrid ceramic CAD/CAM materials (such as VITA ENAMIC and ENAMIC IS)

Possible complications and residual risks of hybrid ceramic CAD/CAM materials in general, and not specific to VITA materials, are:

- Peeling or loosening of the restoration, resulting in possible choking
- Plaque deposits
- Post-operative hypersensitivity
- Irritation of the mucosa
- Gingivitis
- Caries in marginal gaps
- Intolerance and/or potential allergic reaction
- Breakage

These risks must be communicated to the patient by trained personnel (e.g., dental professionals).
